Energy and demand cost savings review for the Molyneux Aquatic Centre.

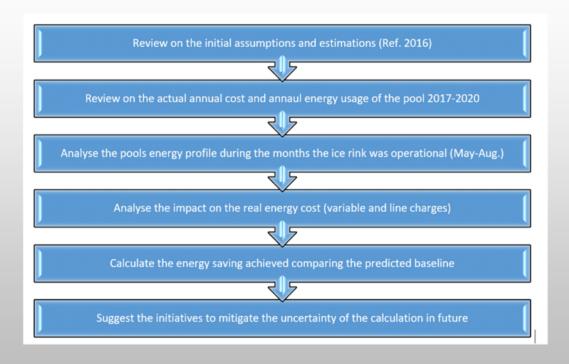

2<sup>nd</sup> March 2021

Item 21.2.5 - Appendix 1

# Waste Heat Recovery System

## **Approach**

### Findings

Savings were estimated at \$47,000 at the end of the first year and \$71,800 by year 3.

Initial cost savings estimates were based on:

- Energy savings of 180,000kWh/year
- Congestion period demand savings of 40kW.

|   | Model  | 2018     | 2019     |
|---|--|----------|----------|
| 1 | Baseline model used in Vincent<br>Community Board 20 <sup>th</sup> Sep 2016<br>Report for Decision. (Waste heat<br>available 2017) | \$22,000 | \$36,000 |
| 3 | Actual 2017 cost and energy usage data   | \$11,000 | \$13,000 |

#### Background

The project was expected to:

- Start reducing the pool electricity costs in 2017.
- Reduce the pool electricity expenditure by over \$40,000 in the first year and over \$60,000 in the second year as CPD reductions were realised
- Provide larger cost savings each year based on electricity costs increasing at rate of 4.3% /year.

| 2021                                | \$187,355                                     | \$112,615   | \$74,740                         | 2%   | \$46,976   | \$62,634            |

6 months availability of thermal energy from the ice rink

Avoid using power with an average value of \$0.11/kWh

Reduce in the pool's energy consumption by 167,378kWh based on an average annual usage of 947,089kWh.

Reduction in the pool's CPD charges by over 40kW

Item 21.2.5 - Appendix 1

#### Considerations

The Aquatics Centre annual electricity usage is dependent on several other factors:

- Use of heated outdoor pool.
- Pool hall conditions (ventilation rates, operational hours, pool hall and pool water temperatures)
- The building envelope
- The operation of the pool heating plant (heat pump or direct electric heating elements).

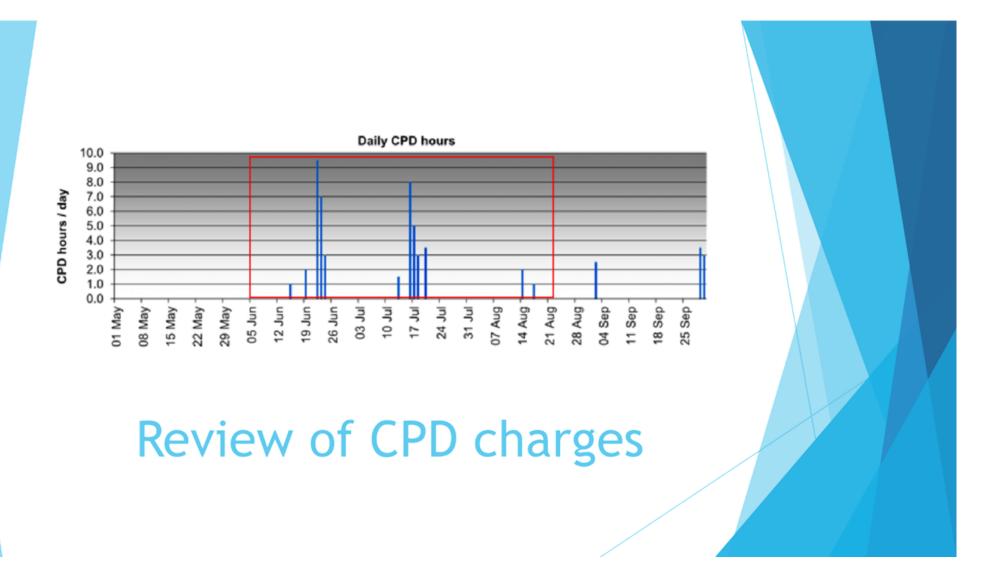

The ice rink was only operational and transferring heat to the pool between the following dates:

- 2020 open 5 June to 23 August.
- 2019 open 15 May to 18 August.
- 2018 open 17 May to 15 August.

## Actual CPD savings Achieved

#### **Further Suggestion**

- Investigate why the Aquatics Centres annual energy usage increased year on year since 2016?
- 2. Investigate why has the peak demand moved from winter to February and November
- Investigate why power factor is poor
- Develop a separate baseline model for the energy usage of the Aquatic Centre and pool heating plant
- 5. Investigate why performance is worse in July and August
